SUMMARY

I am Likitha Harshini Devi, a dedicated and detail-oriented undergraduate student at Veltech University (graduating in 2027), specializing in Computer Science and Engineering. With a strong interest in software development, web technologies, and machine learning, I aim to contribute to impactful projects while continuously improving my technical expertise and teamwork skills.

WORK EXPERIENCE

Full-Stack Intern

July 2025 - October 2025

I completed a three-month internship at GradTwin Pvt. Ltd. as a Full Stack Developer, where I worked on the project titled “Lifecycle Impact of Bioresins in Wind Turbines.” During this internship, I was responsible for developing and managing both the front-end and back-end of a web application using Flask, HTML, CSS, JavaScript, and MySQL. The project focused on analyzing the environmental impact of bioresins used in wind turbine blades. I also contributed to integrating a Feedforward Neural Network (FNN) model for lifecycle impact prediction and implemented database encryption for secure data handling. This experience enhanced my skills in web development, machine learning integration, database management, and team collaboration, while deepening my understanding of sustainable technology solutions.

PROJECTS

Lifecycle Impact of Bioresins in Windturbines

[Link to Demo](#)

During my internship at GradTwin, I worked on a project focused on evaluating the environmental impact of bio-resins used in wind turbine blade manufacturing. The system utilized SQLite for data storage and AES encryption to ensure secure handling of input parameters. This project provided valuable insights into the sustainability improvements achievable through the use of bio-resins compared to conventional materials.

Technologies: Python, Flask, Machine Learning (FNN), SQLite, HTML, CSS, JavaScript

Weather Forecast Web Application

[Link to Demo](#)

As a personal project, I developed a weather forecast web application that provides real-time weather updates for any city using the OpenWeather API. The application features a responsive and user-friendly interface that displays temperature, humidity, and weather conditions dynamically. It includes functionalities such as city search, error handling, and seamless integration of frontend technologies for a smooth user experience.

Technologies: HTML, CSS, JavaScript, OpenWeather API

EDUCATION

2023 - 2027	Bachelor’s Degree at Veltech University	(GPA: 9.2)
2023	Class 12th	(9.0)
2021	Class 10th SSC	(9.3)

SKILLS

Technical Skills Java, HTML, CSS, JavaScript, MySQL, Python

Other Skills Problem Solving, Communication, Team Collaboration, Time Management, Adaptability, Critical Thinking
